

113 episodic-migraine patients recruited at two Korean neurology clinics
(Park 2016 PLOS ONE 11(2):e0149577, page 4)

- 30 withdrew
before end of study

83 patients finished the 3-month diary study

- 21 with diary
adherence < 50%

62 patients kept diary $\geq$ 50% of period
(Park 2016 analytic cohort)

SHD smartphone headache diary - Park et al. 2016 (CC BY)
63 patient_ids (62 Park analytic + 1 reconciliation), 4,516 patient-days
2014-08-13 to 2015-04-13

- 1 reconciliation pt
(- 38 days), excluded
from site analysis

Recruitment site recovered from Sheet 1
62 patients mapped: Uijeongbu 32 - Dongtan 30

Headache target
23.5% of all days

Migraine target
7.2% of all days

Evaluation grid: 4 split types x multiple ratios (488-cell sensitivity sweep)
Headline cell: chronological 70/15/15 - train 3,941 / val 439 / test 136
Sensitivity split types: stratified, patient hold-out, leave-one-site-out
Identical row partitioning across both targets
