

Critical Difference - headache AUROC (Friedman p = 1.09e-11, n cells = 9)

Mean rank (rightmost = best)

$$CD = 6.61$$

Excluded from Friedman (incomplete cell coverage): tabpfn:v2-5-auto

Each method is ranked 1 (best) to 14 within every cell, then averaged over the 9 cells to give its mean rank (dot). Methods joined by a bar differ by less than the critical difference CD (Nemenyi post-hoc, $\alpha=0.05$) and are therefore not significantly different.
