stacked2xgb:pareto_AUROC_slope/auroc_max

Excluded from Friedman (incomplete cell coverage): add0_stacked, add1_tabpfn, add4_window_mlp, pooled_lr, tabpfn:v2-5-auto

Each method is ranked 1 (best) to 17 within every cell, then averaged over the 9 cells to give its mean rank (dot). Methods joined by a bar differ by less than the critical difference CD (Nemenyi post-hoc, alpha=0.05) and are therefore not significantly different.
